

## SUMMARY

Three sites in Colombo municipal limits were taken to evaluate Lead, Sulphur dioxide and Noise levels. Analysis of the pollutants were made at occupational Hygiene Laboratory at Jawatta and the concentration of the above environmental pollutants were noted. The values of the three pollutants are below standard levels and thus the concentrations of these pollutants are not hazardous to the occupants in the three sites.

For the guidance rendered to me during the course period and for assisting.

I like to thank the staff members of occupational institute of hygiene for their kind assistance and cooperation extended to me during the project.

I am thankful to the commissioner of labour for granting permission to do my practical work in the occupational Hygiene laboratory at Jawatta.
