### ABSTRACT

The Bibliography of Higher Education in Sri Lanka provides information on university education from 1859 to 1986.

Part I of the bibliography contains the introduction and an account of the history of higher education. The introduction deals with the scope, contents and the arrangement of the bibliography. The Section on History of Higher Education in Sri Lanka reviews the historical development of university education. Part II of this work contains the bibliography which is broadly grouped into 16 classified sections. These sections cover almost all the important aspects of the subject. It includes history and development, legislaion, administration, curriculum, university admissions, problems and issues and unemployment of graduates. The bibliography also provides statistical information pertaining to higher education abstracted from early sources of reference. The sections of the bibliography are provided with introductory paragraphs and the entries with informative and descriptive annotations. Important dates and events on higher education are listed in Appendix I as a source of reference. The other two appendices consists of an index of authors and of titles.
