

Acceptance of genetic services: a study of physicians in Colombo, Sri Lanka

[R Jayasekara](#), [G B Kristl](#), [W Wertelecki](#)

Summary

A survey of 302 physicians from Colombo, Sri Lanka, reveals a strong overall acceptance of genetic counselling, prenatal diagnosis of genetic disorders and therapeutic abortion. Demographic and experiential factors, especially being older and having children, were associated with acceptance of genetic services. There was little support for prenatal diagnosis in order to satisfy curiosity about the sex of the fetus. The results of this analysis were compared to those from a study of physicians in Arizona, USA.
